

CONSULTING PROPOSAL

Software SaaS

Industry:	SaaS
Duration:	6 months
Users:	500+
Tech Stack:	Python, React, AWS
Date:	February 28, 2026

ProposalStudio - Confidential & Proprietary

1. Project Overview

Parameter	Details
Project Title	Software SaaS
Client	-
Industry	SaaS
Duration	6 months
Expected Users	500
Tech Stack	Python, React, AWS

2. Executive Summary

This proposal outlines the development of a scalable multi-tenant SaaS platform designed to centralize fragmented operational workflows and eliminate data silos for mid-market software providers. By automating complex business logic and integrating real-time analytics, the solution addresses the critical industry challenge of manual process inefficiency, aiming to reduce operational overhead by 35% within the first year. The architecture supports high availability for 500 concurrent users, ensuring that growing SaaS organizations can scale without performance degradation. Strategic value is delivered through enhanced data governance and a projected 150% ROI driven by reduced maintenance costs and improved user retention.

3. Technical Approach

The frontend architecture leverages React with server-side rendering to deliver a responsive single-page application, ensuring seamless user experiences across devices while optimizing for search engine visibility. Backend services will be architected using Python-based microservices deployed on AWS ECS, facilitating a decoupled domain-driven design that supports independent scaling and maintenance. For a user base of 500, we will implement a hybrid database strategy utilizing Amazon RDS for PostgreSQL to handle complex relational queries for billing and user management, while leveraging DynamoDB for high-velocity session data and caching. The deployment strategy utilizes a cloud-native CI/CD pipeline with AWS CodePipeline and infrastructure as code, ensuring zero-downtime deployments and robust environment consistency. Security posture integrates AWS WAF and automated vulnerability scanning to maintain SOC 2 compliance standards expected in the 2026 SaaS landscape.

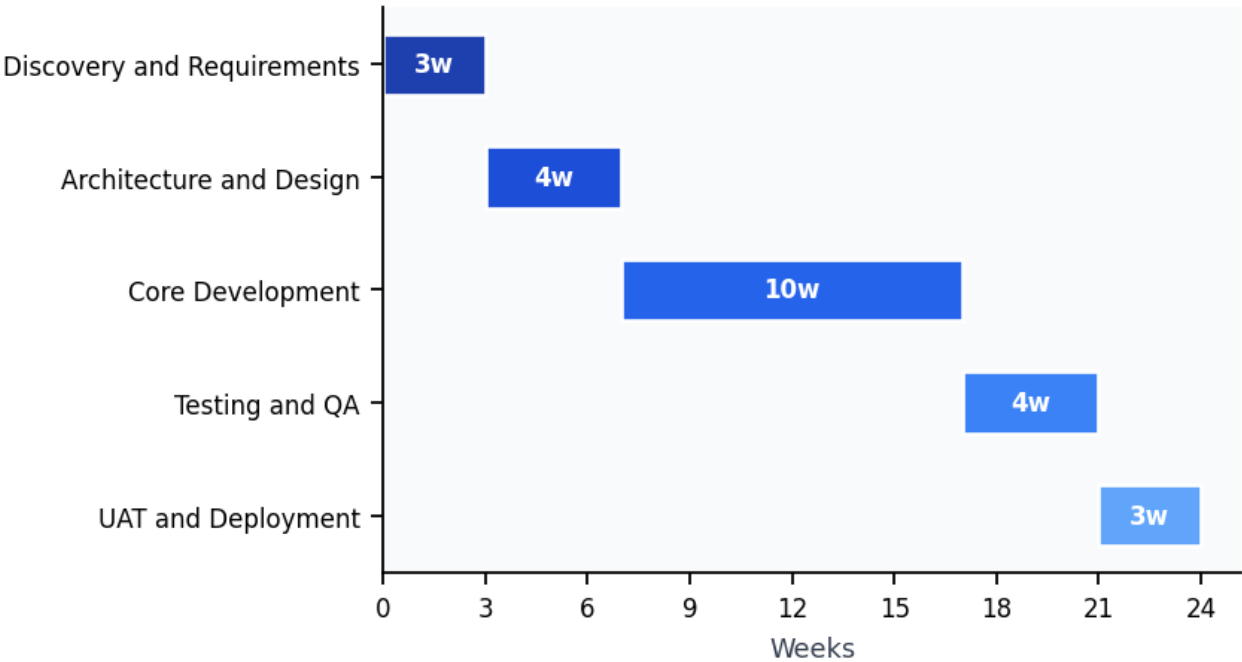

4. Key Deliverables

#	Deliverable
1.	Technical Architecture Document
2.	Source Code Repository
3.	Deployed Production Application
4.	API Integration Guide
5.	User Acceptance Test Report
6.	System Administration Manual

5. Project Timeline

Phase	Dur.	Description
Discovery and Requirements	3w	Conduct stakeholder workshops and analyze existing workflows to produce a detailed Business Requirements Document and Product Backlog.
Architecture and Design	4w	Define the solution architecture, create UI/UX wireframes, and finalize the Technical Design Specification document.
Core Development	10w	Execute agile sprints to build the React frontend and Python backend microservices, delivering a functional Minimum Viable Product.
Testing and QA	4w	Perform comprehensive integration testing, security penetration testing, and load testing to ensure system stability and produce the Test Results Report.
UAT and Deployment	3w	Facilitate user acceptance testing sessions and execute the production deployment plan to release the live system.

Project Timeline (Gantt)

6. Estimated Cost Breakdown

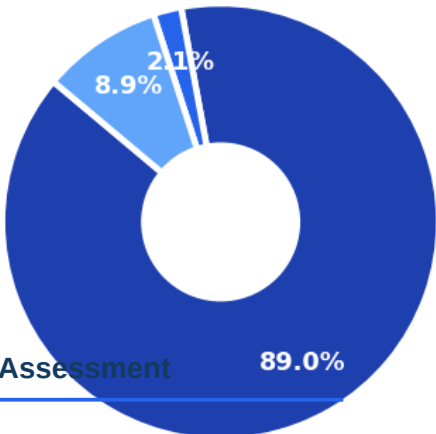

Cost Item	Amount (INR)
Development Cost	Rs. 900,000.00
Infrastructure Cost	Rs. 21,000.00
Contingency (10%)	Rs. 90,000.00
TOTAL ESTIMATED COST	Rs. 1,011,000.00

Monthly average: Rs. 168,500.00

7. Recommended Team Composition

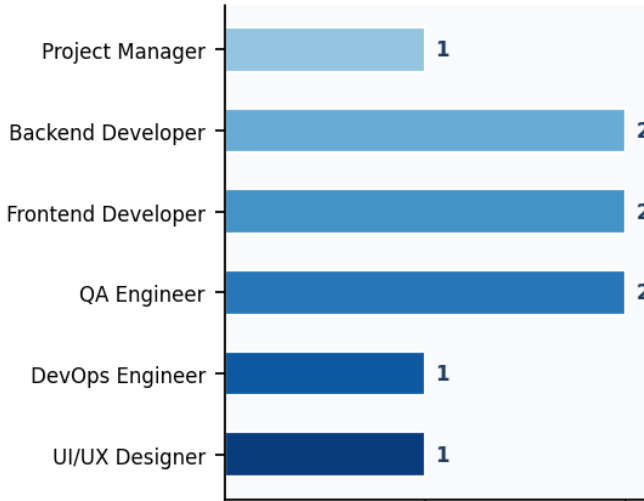

Role	Headcount	Allocation
Project Manager	1	Full-time
Backend Developer	2	Full-time
Frontend Developer	2	Full-time
QA Engineer	2	Full-time
DevOps Engineer	1	Part-time
UI/UX Designer	1	Part-time

Cost Distribution

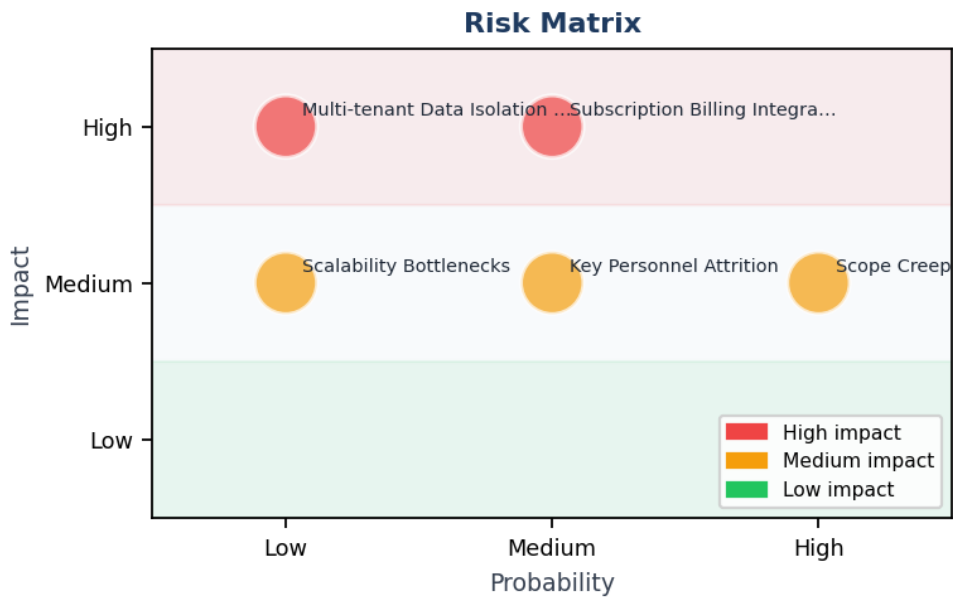

8. Risk Assessment

Team Composition

Risk	Impact	Probability	Mitigation
Multi-tenant Data Isolation Failure	High	Low	Implement strict logical separation controls and automated tenant ID validation within the Python application layer.
Subscription Billing Integration Errors	High	Medium	Utilize sandbox environments for extensive testing of billing cycles and webhook handling before production release.
Scope Creep	Medium	High	Enforce strict sprint governance and a formal change request process to manage backlog modifications.
Scalability Bottlenecks	Medium	Low	Conduct load testing simulating 2x the expected user volume to validate AWS auto-scaling configurations.
Key Personnel Attrition	Medium	Medium	Enforce rigorous documentation standards and conduct weekly knowledge-sharing sessions to minimize dependency on individuals.
